Lautaro Casella

28 YEARS OLD
FULL STACK DEVELOPER

Profile

Full Stack Developer with experience in designing, developing, and maintaining scalable web systems and secure infrastructures. Specialized in the .NET ecosystem (C#, .NET Framework/Core, ASP.NET MVC) and building dynamic interfaces with Angular and React. Focused on implementing best practices through Clean Architecture, design patterns, and relational database optimization to ensure software efficiency and maintainability.

Technologies

Architecture & Backend: C#, .NET Framework, .NET Core, ASP.NET MVC, Clean Architecture, Design Patterns, JWT, Workers.

Frontend: React.js, Angular, TypeScript, JavaScript, Zustand, HTML, CSS, Bootstrap.

Databases: SQL Server, Dapper, Stored Procedures.

Tools: Git, Postman, Figma, SCRUM Methodologies.

Professional Experience

Full Stack Developer
08/2023 - Present • Municipality of San Martin

- End-to-end design and development of the Traffic Surveys system (MVC). Implemented Background Workers for automated notification dispatch (Email, SMS, WhatsApp) and optimized data access using Dapper and Stored Procedures.
- Technical leadership in the "Boleta Digital" ecosystem, modernizing the digital identity model by securely integrating official government APIs (AFIP, ANSES, RENAPER).
- Developed management dashboards with role-based access control, sensitive data encryption, and robust token validation to ensure infrastructure security.

Full Stack Developer
10/2021 - 12/2022 • Municipality of Hurlingham

- Comprehensive development of internal systems for inventory control and operational personnel management.
- Built frontend and backend architectures using Angular, TypeScript, and relational SQL databases.
- Developed an account verification system via email confirmation, implementing security code validation and designing an OTP-style user interface.
- Participated in the full software development lifecycle operating under SCRUM agile methodologies.

Courses & Certifications

Undemy, Redux in Angular with NgRx (04/2023 - 06/2023)

Redux, NgRx (store, devTools, effects), Firebase, AngularFire2, Firebase Deploy & Hosting, REST Services Consumption, State Management, Bootstrap, Git, GitHub.

Udemy, Web Development with Angular (02/2023 - 05/2023)

Components, directives, services, modules, pipes, routing, guards, JWT authentication, MongoDB, Node.js.

Mumuki, Argentina Programa 2021 • 06/2021

Certified

Featured Projects

Data Portal (Repository)

Independent full-stack system designed to process, store, and visualize tax payments, built with a strict focus on scalability and performance.

- Design based on Clean Architecture, strictly decoupling the Domain, Application, Infrastructure, and Web API layers to facilitate maintenance.
- Developed an automated service (.NET Background Worker) implementing the Factory pattern for efficient detection and parsing of incoming payment files in TXT and Excel formats.
- Implemented the Repository pattern and the Dapper Micro-ORM to maximize the speed of operations on the SQL Server database.
- Built a REST API protected with JWT authentication, consumed by a modern frontend client in Angular (Standalone Components)[cite: 18]. Implemented RxJS for reactive programming and AuthGuards to ensure security and access control on client-side routes.

Education

Universidad Nacional de Hurlingham
03/2024 - Present

Bachelor's Degree in Video Game Programming and Simulations.

Universidad Nacional de Hurlingham
03/2018 - 12/2023 (Completed)

University Technician in Computer Science.
